

Attack Surface	Vulnerability	Attack Vector	Threat Actor Type	Risk Statement	Likelihood (High/Med/Low)	Impact (High/Med/Low)	Risk Score (1-6)	Mitigation Strategy
Entire Network Perimeter	Network is secured by a basic router	Router	Cybercriminal, Hactivists	Unauthorized attackers accessing the network due to a weak firewall	3	2	5	Replace with an enterprise level Router that includes prevention of unauthorized user access, a VPN, and regular Firmware updates
WiFi Network	Guest WiFi is shared with employees	Internal WiFi Network	Insider Threat, Cybercriminal	Unauthorized access to network, potentially exposing the network to malicious devices	1	2	3	Implement a strict policy for employees to only use the Employee Network and only allow guests on the Guest Network
Company endpoints, laptops, desktops.	No endpoint protection	Malware, Ransomware	Cybercriminal	Virus infection or malware attack spreading undetected leading to company wide breach	3	2	5	Implement an Endpoint Detection and Response (EDR) on all devices
Email Accounts	Minimal password security practices	Phishing, Credential Stuffing	Cybercriminals, Phishers	Unauthorized system access by way of credential stuffing or brute force attack	2	2	4	Require complex password policies that need to be reset regularly
Everything touching the IT Network	No formal incident response or backup recovery plan	Malware, Ransomware	Cybercriminals, Hactivists, Script Kiddies	Extended system downtime and slow data recovery time	1	3	4	Create an Incident Response Plan (IRP) with Disaster Recovery (DR) plan and perform regular backups
Employees	Lack of formal employee training on cybersecurity	Phishing, Social Engineering	Cybercriminals Social Engineers	Successful phishing attack and/or social engineering attack	2	3	5	Develop a Cybersecurity training on Phishing, Social Engineering and general internet safety and require all employees to complete
